Experiment_10

October 13, 2025

Name:	Tufan Kundu
Registration no:	24MDT0184
Course Name:	Deep Learning Lab
Course Code:	PMDS603P
Experiment:	10
Date:	13 October,2025

0.1 Question 1: First, we will try to load the dataset. Here we Load IMDB dataset with only the top 10,000 most frequent words. Remaining words are discarded in this model. They are assigned some special tokens. Here, each review is stored in the form of a sequence of integers where each integer corresponds to one word in the vocabulary.

0.1.1 Importing the necessary libraries

```python
[1]: from tensorflow.keras.layers import SimpleRNN, LSTM, GRU, Dense, Embedding
     from tensorflow.keras.datasets import imdb
     from tensorflow.keras.models import Sequential
     import numpy as np

     ### getting reviews with words that come under 10000

     vocab_size = 10000
     (x_train, y_train),(x_test,y_test) = imdb.load_data(num_words = vocab_size)
     print(x_train.size)
     print(x_test.size)
```

```
Downloading data from https://storage.googleapis.com/tensorflow/tf-keras-
datasets/imdb.npz

1
this film requires a lot of patience because it focuses on mood and character
development the plot is very simple and many of the scenes take place on the
same set in frances # the sandy dennis character apartment but the film builds
to a disturbing climax br br the characters create an atmosphere # with sexual
tension and psychological # it's very interesting that robert altman directed
this considering the style and structure of his other films still the trademark
altman audio style is evident here and there i think what really makes this film
work is the brilliant performance by sandy dennis it's definitely one of her
darker characters but she plays it so perfectly and convincingly that it's scary
michael burns does a good job as the mute young man regular altman player
michael murphy has a small part the # moody set fits the content of the story
very well in short this movie is a powerful study of loneliness sexual # and
desperation be patient # up the atmosphere and pay attention to the wonderfully
written script br br i praise robert altman this is one of his many films that
deals with unconventional fascinating subject matter this film is disturbing but
it's sincere and it's sure to # a strong emotional response from the viewer if
you want to see an unusual film some might even say bizarre this is worth the
time br br unfortunately it's very difficult to find in video stores you may
have to buy it off the internet

•

0.1.2 Here i-3 because the first three are special tokens.

```
[7]: print("Max length of a review:", len(max((x_train+x_test), key = len)))
     print("Min length of a review:", len(min((x_train+x_test), key = len)))
```

```
Max length of a review: 2697
Min length of a review: 70
```

0.1.3 Next we will try to fix a length of each review say 400 or 200 words. So the ones which have more than that number of words in the review will be trimmed and others will be padded with 0

```
[13]: from tensorflow.keras.preprocessing import sequence
      max_words = 200
      x_train = sequence.pad_sequences(x_train, maxlen = max_words)
      x_test = sequence.pad_sequences(x_test, maxlen = max_words)

      print(x_train[0])
      print()

      x_valid, y_valid = x_train[:64], y_train[:64]
      x_train_, y_train_  = x_train[64:], y_train[64:]

      print(x_train_.shape)

      embd_len = 64
```

0.2 Question 2: Next, build an LSTM model with two LSTM layers with an appropriate choice of max length, embedding length etc and print the results

```python
[19]: # Building LSTM model

      LSTM_model = Sequential()
      LSTM_model.add(Embedding(input_dim=vocab_size,
                               output_dim=embd_len,
                               input_length=max_words))
      LSTM_model.add(LSTM(128, activation='tanh', return_sequences=True))
      LSTM_model.add(LSTM(64, activation='tanh', return_sequences=False))
      LSTM_model.add(Dense(1, activation='sigmoid'))

      LSTM_model.summary()

      ## compiling the model
      LSTM_model.compile(loss='binary_crossentropy',
                         optimizer='adam',
                         metrics=['accuracy'])

      # Training the model
      LSTM_model.fit(x_train_, y_train_,
                     batch_size=64,
                     epochs=3,
```

```
                verbose=1,
                validation_data=(x_valid, y_valid))

# Evaluate on test set
print()
print("LSTM Model score --->", LSTM_model.evaluate(x_test, y_test, verbose=0))
```
